Rural Households in Emerging Societies May 15 2021 The constantly changing circumstances of rural life in sub-Saharan Africa have brought with them both successes and failures. The essays in this volume examine the various pressures and inducements to changing resource-use patterns faced by rural households, and explore the two-way causal relationship between technology and technological change on the one hand and other key elements of rural change - demographic, environmental, economic, social, and political - on the other. Contemporary approaches to the introduction of technical innovations are examined, and new approaches are proposed. Through case studies of particular communities, the wide-ranging impacts of past experiences are assessed, and the causes and consequences of indigenous initiatives are explored.

Energy-Efficient Electric Motors, Revised and Expanded Jul 17 2021 This detailed reference provides guidelines for the selection and utilization of electric motors for improved reliability, performance, energy-efficiency, and life-cycle cost. Completely revised and expanded, the book reflects the recent state of the field, as well as recent developments in control electronics, the economics of energy-efficient motors and systems, and advanced power electronic drivers. It includes five new chapters covering key topics such as the fundamentals of power electronics applicable to electric motor drives, adjustable speed drives and their applications, advanced switched reluctance motor drives, and permanent magnet and brushless DC motor drives.

Electrical Shock Safety Criteria Sep 18 2021 Electrical Shock Safety Criteria documents the proceedings of the First International Symposium on Electrical Shock Safety Criteria, held in Toronto, Canada, 7-9 September 1983. The objective was to establish the state of the art in the field of electrical shock safety criteria as applied to electrical power utilities. The symposium brought together leading experts from electrical utilities, universities, and research laboratories from around the world, interested in problems associated with electrical shock and safety. The proceedings are organized in three sections, each consisting of the morning review papers and afternoon panel discussions. Section 1 presents an in-depth analysis of the physiology of electrical shocks including such topics as body-weight scaling, electrocution equation, physiological effects of electrical current, and factors affecting fibrillation threshold. Section 2 focuses on the analysis of body impedance under various conditions and the techniques for measuring current distribution in the body. Section 3 is devoted to discussions of safety criteria and related standards from the point of view of current practices in electrical utilities.
