CERT Resilience Management Model (CERT-RMM) Mar 01 2020 CERT® Resilience Management Model (CERT-RMM) is an innovative and transformative way to manage operational resilience in complex, risk-evolving environments. CERT-RMM distills years of research into best practices for managing the security and survivability of people, information, technology, and facilities. It integrates these best practices into a unified, capability-focused maturity model that encompasses security, business continuity, and IT operations. By using CERT-RMM, organizations can escape silo-driven approaches to managing operational risk and align to achieve strategic resilience management goals. This book both introduces CERT-RMM and presents the model in its entirety. It begins with essential background for all professionals, whether they have previously used process improvement models or not. Next, it explains CERT-RMM's Generic Goals and Practices and discusses various approaches for using the model. Short essays by a number of contributors illustrate how CERT-RMM can be applied for different purposes or can be used to improve an existing program. Finally, the book provides a complete baseline understanding of all 26 process areas included in CERT-RMM. Part One summarizes the value of a process improvement approach to managing resilience, explains CERT-RMM's conventions and core principles, describes the model architecturally, and shows how it supports relationships tightly linked to your objectives. Part Two focuses on using CERT-RMM to establish a foundation for sustaining operational resilience management processes in complex environments where risks rapidly emerge and change. Part Three details all 26 CERT-RMM process areas, from asset definition through vulnerability resolution. For each, complete descriptions of goals and practices are presented, with realistic examples. Part Four contains appendices, including Targeted Improvement Roadmaps, a glossary, and other reference materials. This book will be valuable to anyone seeking to improve the mission assurance of high-value services, including leaders of large enterprise or organizational units, security or business continuity specialists, managers of large IT operations, and those using methodologies such as ISO 27000, COBIT, ITIL, or CMMI.

National Emergency Communications Plan Nov 08 2020 Every day in cities and towns across the Nation, emergency response personnel respond to incidents of varying scope and magnitude. Their ability to communicate in real time is critical to establishing command and control at the scene of an emergency, to maintaining event situational awareness, and to operating overall within a broad range of incidents. However, as numerous after-action reports and national assessments have revealed, there are still communications deficiencies that affect the ability of responders to manage

routine incidents and support responses to natural disasters, acts of terrorism, and other incidents. Recognizing the need for an overarching emergency communications strategy to address these shortfalls, Congress directed the Department of Homeland Security's (DHS) Office of Emergency Communications (OEC) to develop the first National Emergency Communications Plan (NECP). Title XVIII of the Homeland Security Act of 2002 (6 United States Code 101 et seq.), as amended, calls for the NECP to be developed in coordination with stakeholders from all levels of government and from the private sector. In response, DHS worked with stakeholders from Federal, State, local, and tribal agencies to develop the NECP—a strategic plan that establishes a national vision for the future state of emergency communications. To realize this national vision and meet these goals, the NECP established the following seven objectives for improving emergency communications for the Nation's Federal, State, local, and tribal emergency responders: 1. Formal decision-making structures and clearly defined leadership roles coordinate emergency communications capabilities. 2. Federal emergency communications programs and initiatives are collaborative across agencies and aligned to achieve national goals. 3. Emergency responders employ common planning and operational protocols to effectively use their resources and personnel. 4. Emerging technologies are integrated with current emergency communications capabilities through standards implementation, research and development, and testing and evaluation. 5. Emergency responders have shared approaches to training and exercises, improved technical expertise, and enhanced response capabilities. 6. All levels of government drive long-term advancements in emergency communications through integrated strategic planning procedures, appropriate resource allocations, and public-private partnerships. 7. The Nation has integrated preparedness, mitigation, response, and recovery capabilities to communicate during significant events. The NECP also provides recommended initiatives and milestones to guide emergency response providers and relevant government officials in making measurable improvements in emergency communications capabilities. The NECP recommendations help to guide, but do not dictate, the distribution of homeland security funds to improve emergency communications at the Federal, State, and local levels, and to support the NECP implementation. Communications investments are among the most significant, substantial, and long-lasting capital investments that agencies make; in addition, technological innovations for emergency communications are constantly evolving at a rapid pace. With these realities in mind, DHS recognizes that the emergency response community will realize this national vision in stages, as agencies invest in new communications systems and as new technologies emerge.

Security Planning Jul 17 2021 This book guides readers through building an IT security plan. Offering a template, it helps readers to prioritize risks, conform to regulation, plan their defense and secure proprietary/confidential information. The process is documented in the supplemental online security workbook. Security Planning is designed for the busy IT practitioner, who does not have time to become a security expert, but needs a security plan now. It also serves to educate the reader of a broader set of concepts related to the security environment through the Introductory Concepts and Advanced sections. The book serves entry level cyber-security courses through those in advanced security planning. Exercises range from easier questions to the challenging case study. This is the first text with an optional semester-long case study: Students plan security for a doctor's office, which must adhere to HIPAA regulation. For software engineering-oriented students, a chapter on secure software development introduces security extensions to UML and use cases (with case study). The text also adopts the NSA's Center of Academic Excellence (CAE) revamped 2014 plan, addressing five mandatory and 15 Optional Knowledge Units, as well as many ACM Information Assurance and Security core and elective requirements for Computer Science.
